

IN THE SPECIFICATION

Page 13, lines 3-10, please r place the paragraph as follows:

The diamines useful herein can be defined by the following structure:

wherein R_{2-5} are independently selected from H, methyl, $-\text{CH}_3\text{CH}_2$, and ethylene oxides; C_x and $[[C_y]] C_y$ are independently selected from methylene groups or branched alkyl groups where $x+y$ is from about 3 to about 6; and A is optionally present and is selected from electron donating or withdrawing moieties chosen to adjust the diamine pKa's to the desired range. If A is present, then x and y must both be 1 or greater.
